**Omaha is on its way to
being a robust center of
STEM innovation.**

Dear Mr. and Mrs. Last Name,

The Omaha STEM Ecosystem needs your help in building the future of STEM within the youth of Omaha.

The STEM field is ever growing throughout the nation, yet there has been a steady decline in STEM jobs in our community. The STEM field is comprised of four core subjects that include math, science, engineering and technology and these fields are important to our community.

These fields are the future of our nation, and just like our youth, we need to invest in their betterment. The Omaha STEM Ecosystem is actively raising money for a scholarship fund for the AIM Code School. Students who can't afford the program will be given the opportunity to attend through your donations to this fund.

We are asking your help providing an opportunity to our youth by donating to our scholarship fund. Just head to our website <https://omahastem.com/donate/>. By donating you are investing in the youth of our community, you're helping stop the steady decline of STEM!

If you are looking for more information, join our session hosted by AIM on April 30th from 7 p.m. to 8 p.m. at 1902 Howard Street Omaha, NE 68102.

Julie Sigmon
The Director of the Omaha STEM Ecosystem

P.S.
Your donation is not only giving a child better opportunities, but building a better Omaha.
